Non-Destructive Technology (NDT) Apprenticeships:
- NDT Operator
- NDT Engineering Technician
- NDT Engineer

Kick-start your career and earn while you learn with an NDT apprenticeship

Sam Cunningham, Skills Training UK, said: “Over the past few years, the NDT apprenticeship scheme has gone from strength to strength. More employers than ever are recruiting NDT apprentices in various industrial sectors such as aerospace, oil and gas, power generation, motorsport and renewable energy. As NDT is a requirement in most sectors there has been no slowdown for the need of NDT inspectors and technicians and the recruitment drive for these individuals is stronger than ever. The NDT industry has shown its resilience through numerous reclosures and the pandemic, proving to be an excellent career choice for someone who is driven, enthusiastic and committed to making the world a safer place.”

John Moody, senior technical engineer, BINDT, added: “It continues to be a pleasure to meet NDT apprentices at the end-point assessment, where the journey as an apprentice ends for some and others move on to higher-level apprenticeships. All the apprentices demonstrate a commitment to NDT and are well rounded with training, certification and on-the-job experience, making them a force to be reckoned with now and in the future. I expect that our future managers and leaders are amongst these young people.”
